SMARTCHARGE™

The reputation of your conference facilities rests on the satisfaction of delegates and organisers.

Leading properties strive to stand out from the crowd and now with SmartCharge™ at your venue you can.

The following information explains how the SmartCharge™ system works and how this will position your property one step ahead.

It is only natural for conference delegates to want their smartphones next to them at all times and for their devices to remain charged.

All the 'so called' wireless charging solutions on the market have a major drawback and this is the fact they are not wireless.

They have to be plugged in to mains electricity in order to work massively limiting where these solutions can be used.

This is not the case with SmartCharge™ because for the first time there is a flexible solution using rechargeable batteries, mains electricity is not required so tables can be positioned anywhere.

HOW IT WORKS

SmartCharge™ tables have removable tops and folding underframes that fit on special purpose trolleys allowing rapid reconfiguration, ready for use, anywhere in your venue!

Two removable battery packs allow conference delegate to charge their mobile device without cables or the need for access to mains electricity.

The removable tops are fitted in a matter of moments with no tools or skilled labour required and the two batteries simply push in place.

The batteries have an anti-theft design and are easily removed using the SmartCharge™ key.

The keys are magnetic and fix on the SmartCharge™ trolley.

Table underframes fold and hang on the trolley whilst the removable table tops slot in to a 'toast rack' style magazine in the same trolley.

Batteries slide in to dedicated charging locations on the trolley.

Once everything is stowed on the SmartCharge™ trolley this is then moved back of house for overnight charging using one integral cable.

(See pages 10 & 11 for further information on the SmartCharge™ trolley)

SMARTCHARGE™

The intensive use of smartphones implies more often recharging. This service is therefore one of the expectations of customers in public places.

In addition to being truly wireless, SmartCharge™ provides several other key benefits

- Increase delegate satisfaction by providing a service increasingly expected by customers.
- Differentiate yourself from competition not using SmartCharge™
- Increase revenue via online bookings
- Promote loyalty programs

Technical Information

- SmartCharge™ equipment is Qi certified delivering a positive and safe wireless charging experience.
- We recommend you adopt a regular charging schedule by charging overnight after each function although batteries can last a few days depending on use (a full charge takes 7 hours)
- Each battery is 15Ah and there are also 2 USB ports on the battery packs that allow charging of tablets, power banks and other mobile devices.
- The following is not exhaustive but comparable devices include those from APPLE, SAMSUNG, SONY, LG, GOOGLE, MOTOROLA, MICROSOFT, NOKIA, HTC, PANASONIC, SHARP, KYOCERA, HUAWEI, ONEPLUS
- SmartCharge™ also works with Qi certified earphones and headphones.
- The on top antenna is as shown on this page, we also offer a less visible embed antenna although with this there is far less possibility to customise and a QR scan cannot be added.

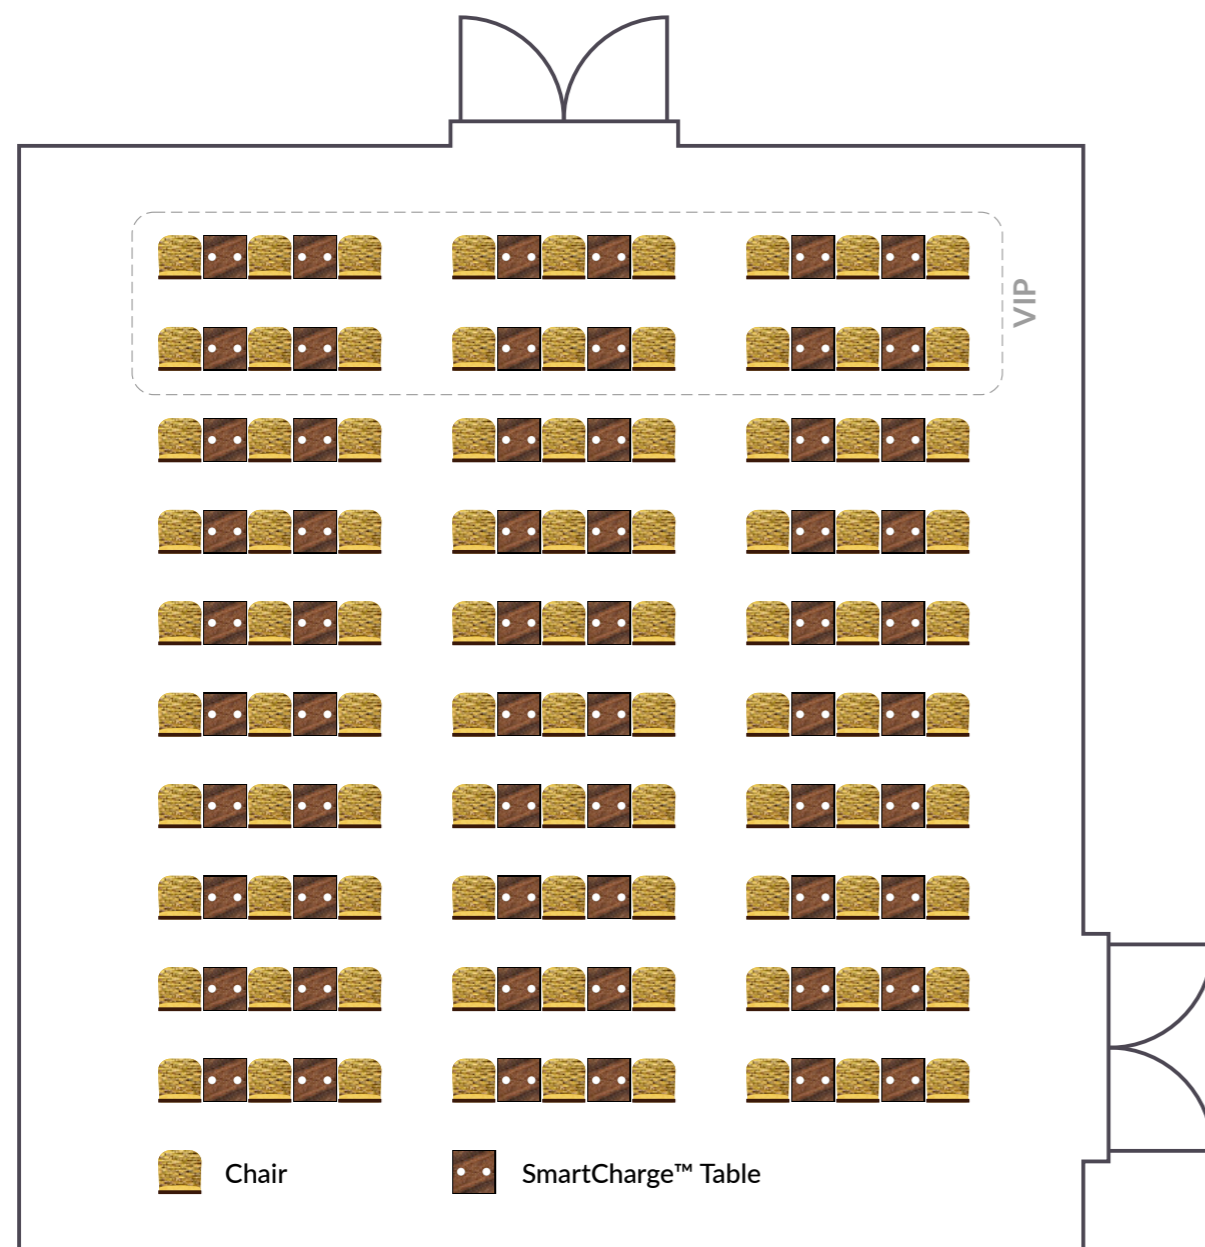

We look forward to showing you SmartCharge™ and explaining how this can revolutionise your conference facilities.

SmartCharge™ tables can be finished in any RAL colour or one of our highly desirable Wood Wrap™ frame finishes.

CAPACITY

SmartCharge™ can be used for the first two rows of VIP seating or throughout your venue.

Please contact the sales office for images of SmartCharge™ tables finished in one of our highly desirable Wood Wrap™ frame finishes.

Wood Wrap™ finishes are especially popular with leading hotels, in particular our Lime-Wash and Walnut finishes.

1 SmartCharge™ table is required for use with 2 chairs

2 SmartCharge™ tables are required for use with 3 chairs

2 SmartCharge™ tables are required for use with 4 chairs

3 SmartCharge™ tables are required for use with 5 chairs

3 SmartCharge™ tables are required for use with 6 chairs

Based on the example configuration shown on page 6; just 12 tables would be required to offer SmartCharge™ for the first two rows of VIP seating, this equates to 1 full trolley.

Based on the example configuration shown on page 6; you would require 60 tables to offer SmartCharge™ on all rows, this equates to 5 full trolleys.

There is a choice of twelve standard table top finishes with other finishes on request and at additional cost.

There is sufficient space on the table tops to allow venues and conference organisers to provide bottles of water, glasses, welcome cards, flower arrangements or as you decide.

SMARTCHARGE™

SMARTCHARGE™ antennas can be customised (subject to volume) and excellent ROI is achieved due to the QR code that links directly to a hotel's website or a loyalty programme.

This is a huge commercial benefit as it provides for additional revenue (F&B, spa bookings etc) whilst also encouraging conference delegates to join loyalty programmes and owners obviously know the financial benefit of this.

Please try the QR code below yourself.

SMARTCHARGE™ F&B is designed for all day dining where customers have existing tables but would like to add our unique wireless charging solution, this is possible with SMARTCHARGE™ as mains electricity is NOT required.

SMARTCHARGE™ is also available on our mobile flip top meeting room tables and our new range of cocktail tables, something your customers will remember.

THE TROLLEY

Designated battery charging locations & the red magnetic anti-theft removal keys

Plug in the single integral cable to charge

'Toast Rack' style magazine safely holds table tops when these are removed from the folding legs.

Ready for use in a matter of moments with no tools or skilled labour required

Folding legs hang on the trolley
